AOC’s Vicast A597 is a low viscosity, pre-promoted marble resin created for maximum versatility in the production of synthetic marble parts including vanities and tubs.

Applications
Vicast A597 is designed to allow extreme flexibility in selecting the combination of gel time and fillers that suits the specific manufacturing process, working conditions and raw materials.

Benefits
• Extended gel time for heated systems or maximum working time
• Low/ medium viscosity for minimal resin demand
• Reduced monomer at standard viscosity
• Short cure times at moderate exotherms
• Good gel and demold times
• Controlled shrink and moderate exotherm for making tops and tubs
• Proper reactivity, shrink and strength to use with highly filled or exotherm suppressed systems
