AOC’s Vicast A856 is a low viscosity, pre-promoted casting resin designed to minimize resin demand in the production of synthetic marble parts.

**Applications**
AOC’s Vicast A856 is a low viscosity, pre-promoted casting resin designed to minimize resin demand in the production of synthetic marble parts.

**Benefits**
- Low viscosity for minimal resin demand
- Low monomer content to control shrinkage
- Short cure times for quick demold
- Superior wet-out and air release that allow the highest possible filler loadings
- Allows manufacturers to make lightweight parts at lower resin demand than traditional marble mixes
