AOC’s Altek H864 is a medium reactive, resilient, thixotropic, pre-promoted resin.

APPLICATIONS
The H864 is designed for use in the manufacturing of boats and other composite parts using hand lay-up or spray-up applications methods.

BENEFITS
• Fast laminate cure allows for faster production rates without the loss of surface profile
• Increased resistance to osmotic blistering when compared to traditional general purpose products
• Enhanced mechanical properties
• Designed for improved green strength of composite
• Meets MACT requirements for low HAP resins in the marine industry
• Toughened, resilient polymer
