AOC’s Pultru P007 is a low VOC, bisphenol A epoxy-based vinyl ester resin dissolved in styrene.

**APPLICATIONS**
The Pultru P007 series is ideally suited for use in pultrusion applications where outstanding mechanical properties and excellent resistance to chemicals and heat are required.

**BENEFITS**

**Versatile**
Wide formulating capabilities allow for optimization of cost/performance.

**Corrosion Resistance**
Offers excellent resistance to many corrosive environments.

**Food and Drug**
All resins in this series are manufactured from raw materials that are listed in FDA regulation Title 21 CFR 177.2420. It is the fabricator’s responsibility to also be sure that the final composite is well cured.
