AOC’s S081-700 resin system is a unique polyester/vinyl ester hybrid. It is specially formulated for structural SMC applications that require higher mechanical properties when exposed to a hot or corrosive environment.

APPLICATIONS
• Radiator supports
• Cross-vehicle beams
• Valve covers/oil pans
• Fuel tank heat shields
• Windshield wiper cowl plenums

BENEFITS
• Performs like a vinyl ester
• Chemically thickens with the ease and consistency of a polyester
• Physical performance superior to conventional polyesters
• Excellent property retention at elevated temperatures
