Atryl S342 is a high reactivity PG maleate polyester resin for closed mold processing. Molecular weight distribution is tightly controlled to yield consistent results during processing and in final part performance. S342 can be combined with a wide variety of low profile additives to yield excellent surface aesthetics.

APPLICATIONS
Proven performance in SMC BMC and pultrusion applications.

BENEFITS
• High reactivity
• Precise molecular weight distribution
• Low color
• High gloss and excellent surface smoothness
• Designed for demanding cure and surface requirements
• such as short press cycle times and thin laminate pultrusion
• Allows high filler loadings with workable mix viscosities
