AOC’s S903-501 polyester resin is a mixture of a highly reactive polyester resin, low profile additives and styrene. It is designed for use in compression molding applications. It can be used in Class A automotive systems and can be formulated to work in low pressure applications.

APPLICATIONS
• Truck and automotive parts
• Recreational equipment

BENEFITS
• Consistent thickening for SMC applications.
• Provides smooth surface and dimensional control (Expansion System)
• Paintable, coatable and bondable
